ISBN-13: 978-0262110853

Product Dimensions: 9.2 x 5.9 x 0.9 inches

Shipping Weight: 1.2 pounds

Average Customer Review: 3.8 out of 5 stars [See all reviews](#) (37 customer reviews)

Best Sellers Rank: #1,189,144 in Books (See Top 100 in Books) #278 in [Books > Christian Books & Bibles > Theology > Creationism](#) #5622 in [Books > Science & Math > Evolution](#) #25260 in [Books > Religion & Spirituality > Religious Studies > Theology](#)

Customer Reviews

This is an older book, but it still remains the classic refutation of Scientific Creationism. While many new discoveries have been made in the nearly two decades since this work first appeared, Kitcher still provides a valuable inquiry into the tactics of the Scientific Creationists, and exposes the vacuity of their arguments soundly. This is true because much of this book explains the philosophy of science, and the scientific method, rather than relying on detailed expositions of particular scientific findings. Kitcher exposes the great difference that exists between the very natures of science and creationism. Kitcher examines the main arguments of creationists, and describes why they are wrong. But more importantly, he looks carefully at their tactics, and illustrates their essential dishonesty. For instance, Creationist literature is full of comments taken out of context from mainstream scientists, in an attempt to make it look like those scientists believe something very different than what they actually believe. He shows how both Gish and Morris, arguably the two most popular creationists, use this tactic repeatedly. For example, Gish discusses the work of A.W. Crompton, who demonstrated in 1978 and 1979 how the bones of the mammalian ear developed from the jawbones of reptiles. He then declares, "Kermack and his co-workers now reject this idea." Gish neglects to tell us, however, that Kermack's hypothesis was published in 1968 and 1973, a full decade before Crompton's work, which, of course, superceded it. Likewise, Morris quotes G.G.

Simpson's "The Major Features of Evolution" as saying that most new species appear suddenly in the fossil record in an attempt to demonstrate his assertion that no transitional fossils exist.
